Sanjay Rawat

Bangalore, India +91 6263801708 sanjayrawat0570@gmail.com LinkedIn GitHub Portfolio

PROFESSIONAL SUMMARY

Software Engineer with strong foundations in data structures, algorithms, and core computer science principles. Skilled in building backend services and working with APIs, web infrastructure, and asynchronous workflows, with a focus on writing reliable, maintainable code and quickly understanding complex technical documentation.

TECHNICAL SKILLS

AI & Generative AI: LLM Integration, Prompt Engineering, RAG, LangChain, LangGraph, AI Agents, Multi-Agent Orchestration
Languages: Python, C++, TypeScript, JavaScript, SQL, HTML/CSS
Frontend: React, Next.js, Tailwind CSS, shadcn/ui, React Hook Form, Zod, Redux
Backend: FastAPI, Flask, Node.js, Express.js, REST APIs, JWT, WebSockets
Databases: MongoDB, PostgreSQL, pgvector, FAISS, Pinecone, Qdrant, Supabase
DevOps & Tools: Docker, Docker Compose, GitHub Actions, CI/CD, Vercel, Git

PROFESSIONAL EXPERIENCE

Frontend Developer Intern — Vaishalitech (Remote) Jun 2025 – Sep 2025

- Developed a comprehensive admin dashboard with React and Redux managing end-to-end order workflows across 5 operations: listing, filtering, creation, editing, and deletion.
- Built a reusable UI component library spanning 4 component families — forms, data tables, modals, and notifications — following consistent design patterns for scalability.
- Integrated REST APIs covering all 3 UI states (loading, error, and success) with optimistic updates for seamless real-time synchronization.

Full Stack Developer Intern — Tradegospel (Remote) Sep 2025 – Nov 2025

- Built a full-stack trading education platform across 2 services — a Next.js frontend and a Node.js (Express.js) REST API — for learning live stock markets and investment strategies.
- Implemented real-time stock visualization with live market APIs, displaying 3 categories of market analytics: profit and loss, price trends, and technical indicators.
- Developed interactive dashboards tracking earnings, win rates, and risk analytics, with a responsive design across 3 breakpoints: desktop, tablet, and mobile.

PROJECTS

Enterprise RAG System — Workflow & Orchestration Engine
Python, FastAPI, Docker, OpenTelemetry

- Built a production-grade Enterprise RAG system in Python/FastAPI with a complete document pipeline (ingestion, semantic chunking, multi-model embeddings, and an in-process vector index supporting multi-tenant namespaces and metadata filtering), delivering hybrid dense + sparse retrieval via BM25 and Reciprocal Rank Fusion.
- Engineered a DAG-based workflow orchestration engine supporting parallel/topological node execution, conditional branching, result merging (voting, ranking, consensus), retry with backoff, and a shared circuit breaker for fault-tolerant, real-time streaming (SSE) pipelines.
- Implemented advanced retrieval and generation features including cross-encoder/MMR reranking, token-budgeted context augmentation with citations, pluggable LLM providers (Google Gemini), and semantic response caching with per-tenant cost/token budgeting — instrumented end-to-end with OpenTelemetry.

Smart Coaching Platform — AI Coaching Institute
Python, FastAPI, LangGraph, LangChain, Next.js 14, TypeScript, Supabase, Qdrant, Docker

- Built a multi-agent AI coaching platform using Python, FastAPI, LangGraph, and LangChain, orchestrating 12+ specialized agents (doubt resolution, test generation, answer evaluation, at-risk detection, rank prediction) with a RAG pipeline over Qdrant vector search and Sentence-Transformers embeddings to deliver personalized, curriculum-grounded responses.
- Developed a role-based web application with Next.js 14, TypeScript, React, and Tailwind CSS, delivering four distinct dashboards (Student, Teacher, Parent, Admin) with Supabase JWT authentication, Row-Level Security, and real-time streamed AI answers over Server-Sent Events (SSE).
- Deployed a full-stack, containerized system with Docker across Railway (FastAPI backend) and Vercel (frontend), integrating multi-LLM providers (Groq, Google Gemini, OpenAI), automated scheduling (APScheduler), and multi-channel notifications (Resend email, Twilio SMS) for progress reports and inactivity alerts.

InsightLoop — AI-Native Business Intelligence Platform
Python, FastAPI, Next.js, LangChain, Ollama, WebSockets, PostgreSQL, MySQL, MongoDB

- Built InsightLoop, an AI data-analytics platform with a FastAPI (Python) backend and Next.js frontend that lets users connect a data source and ask questions in plain English, with an LLM agent generating and running the SQL for them.
- Integrated multiple data sources — PostgreSQL, MySQL, MongoDB, CSV, Google Sheets, and REST APIs — into a unified query layer, including a MongoDB connector that flattens nested documents into queryable relational tables.
- Designed a resilient LLM agent pipeline (LangChain) that streams results over WebSockets and gracefully falls back to a local Ollama model, so analysis keeps working even when the primary API is unavailable.

EDUCATION

SAGE University, Indore Bachelor of Technology in Computer Engineering (CGPA: 8.38) Sep 2022 – Jun 2026

CERTIFICATIONS & ACHIEVEMENTS

Developing Front-End Apps with React — IBM, Coursera • LeetCode Knight rank
